STREET FURNITURE · USE AND CARE

Maintenance manual

Joma Urban furniture is designed to last for decades outdoors with minimal care. Joma Marine™ steel, HPL panel and concrete need no maintenance: just clean them from time to time. This guide explains how.

Joma Marine™ steel

NO MAINTENANCE

MAINTENANCE
No maintenance needed. The Joma Marine™ treatment (corrosion class C5 to EN ISO 12944-2:2017) protects the steel against rust for life, even near the sea.

CLEANING
Water and mild soap with a soft cloth. Avoid scouring pads, abrasives and solvents, which can damage the paint.

IMPACTS
If an impact chips the paint, contact Joma: we will tell you how to touch it up in the same RAL colour.

HPL panel (phenolic)

NO MAINTENANCE

MAINTENANCE
No maintenance needed. The high-pressure laminate (EN 438-6) keeps its colour for life and resists scratches and impacts.

CLEANING
Water and mild soap with a soft cloth. For graffiti, use a cleaner made for laminates. Do not use abrasives.

Architectural concrete

NO MAINTENANCE

MAINTENANCE
No maintenance needed. It has a factory-applied water-repellent, anti-mould treatment.

CLEANING
Water and a brush, or a pressure washer. For stains, a mild detergent. Do not use acid products, which attack the concrete surface.

For all pieces

- Once a year, check that the screws and anchors are still tight.
- Do not use steel wool, abrasive products, bleach, acids or solvents.
- Clean with water, mild soap and a soft cloth or brush. Rinse with clean water.
- If a part is damaged by an impact or vandalism, it can be replaced on its own: contact Joma with the product reference.
